FOUNDATIONS OF WEB DESIGN

CLASS 9

**Responsive
Design
Flexbox
Layout**

<https://dem-1323.github.io/foundations-of-web-design/>

MEDIA QUERIES

Media queries are used to apply different styles for different screen sizes. They are written using the `@media` rule.

- Common breakpoints:
- Small devices: 600px and below
- Medium devices: 600px to 1024px
- Large devices: 1024px and above

Example:

```
@media (max-width: 600px) {  
  body {  
    background-color: lightblue;  
  }  
}
```

FLUID LAYOUT

Fluid layouts use flexible units like percentages instead of fixed units like pixels.

Example:

```
.container {  
  width: 80%;  
}
```

```
@media (max-width: 600px) {  
  .container {  
    width: 60%;  
  }  
}
```

FLEXBOX LAYOUT

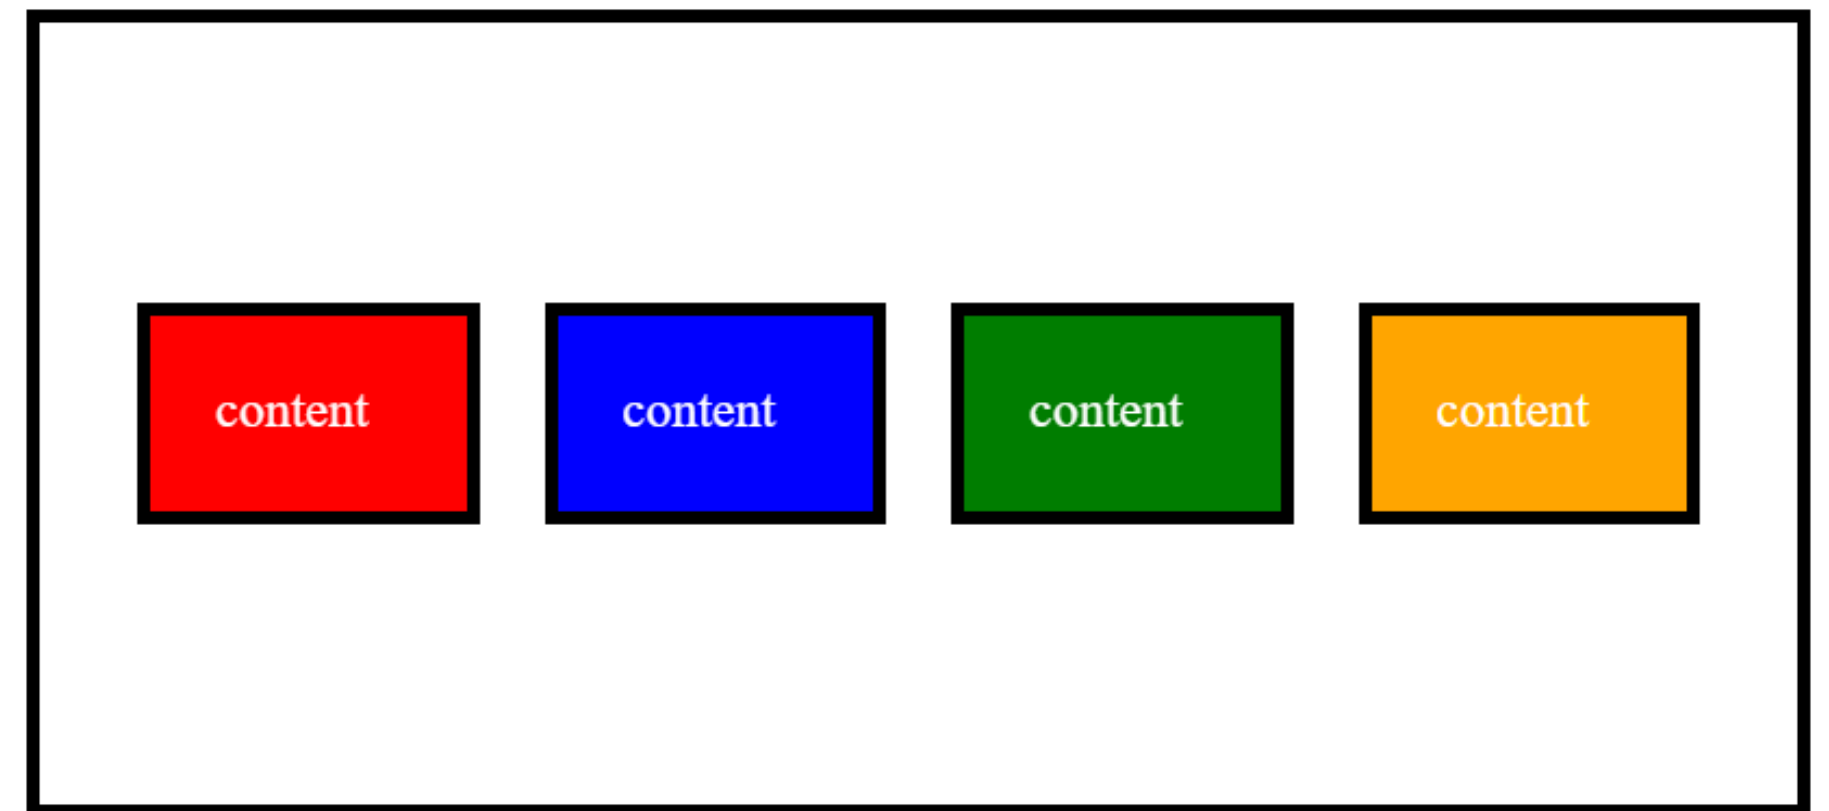

Properties

- **display: flex**
- **flex-direction**
- **justify-content**
- **align-items**

Example:

```
#flexbox {  
  display: flex;  
  flex-direction: row;  
  align-items: center;  
}
```

Flexbox

FLEX-DIRECTION

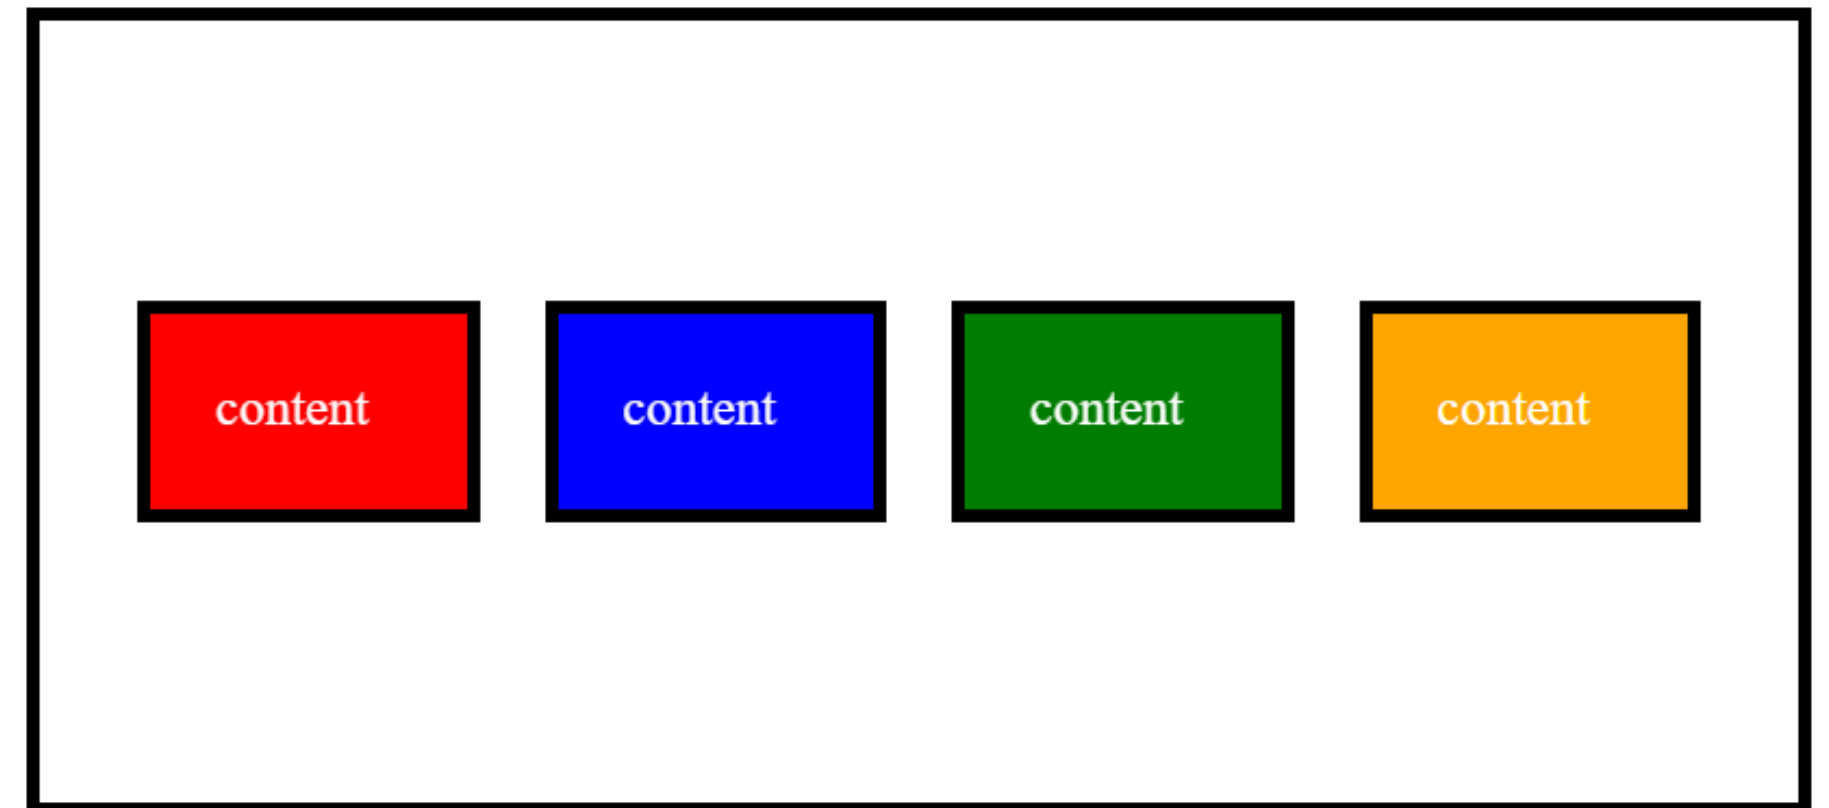

flex-direction property values:

- **row**
- **column**
- **row-reverse**
- **column-reverse**

Example:

```
#flexbox {  
  display: flex;  
  flex-direction: row;  
}
```

Flexbox

JUSTIFY-CONTENT

justify-content organizes items
along the x-axis

property values:

- **flex-start**
- **flex-end**
- **center**
- **space-between**
- **space-around**

Example:

```
#flexbox {  
  display: flex;  
  flex-direction: row;  
  justify-content: flex-end;  
}
```

ALIGN-ITEMS

align-items organizes items
along the y-axis

property values:

- **flex-start**
- **flex-end**
- **center**
- **baseline**
- **stretch**

Example:

```
#flexbox {  
  display: flex;  
  flex-direction: row;  
  align-items: flex-end;  
}
```

FLEX-WRAP

flex-wrap controls if items should wrap onto many lines
property values:

- nowrap
- wrap
- wrap-reverse

Example:

```
#flexbox {  
  display: flex;  
  flex-direction: row;  
  flex-wrap: wrap;  
}
```
